PROFILE

Full Stack Architecture & Leadership

- Full Stack Architect Manager with **10+ years** of experience building scalable web applications, enterprise platforms, and cloud-native solutions.
- Proven experience leading teams, defining technical roadmaps, and delivering high-impact products across e-commerce, customer experience, telephony, and collaboration domains.

Front-End & Back-End Expertise

- Strong expertise in React.js, **Next.js**, Node.js, JavaScript/TypeScript, **Redux**, MongoDB, PostgreSQL, Redis, **Docker**, and **AWS** Lambda.
- Experienced in building RESTful APIs, GraphQL services, microservices, and serverless architectures for scalable and high-performance applications.

GenAI & RAG Experience

- Hands-on experience with **GenAI**, **RAG**, **Vertex AI**, and **OpenAI** for building intelligent solutions.
- Developed AI-powered applications for BDD automation, test generation, e-commerce search, recommendations, and conversational experiences.

Professional Strengths

- Strong problem-solving, performance optimization, and stakeholder management skills.
- Passionate about innovation, continuous learning, and leveraging modern technologies to solve business challenges.

WORK EXPERIENCE

Tredence Inc

2025–current

Architect Fullstack

Client: EA Sports – ReefChat Experience

- Developed ReefChat, an AI-powered internal assistant for EA Sports using Next.js, Python, RAG, and GenAI.
- Built features for generating images, files, and content for internal teams, improving productivity and reducing manual effort. **Technologies Used:** Next.js, Python, RAG, OpenAI, GenAI, AWS, DynamoDB.

Tredence Projects

- Architecting and developing the BDD Forge App using Next.js, Node.js, MongoDB, and GenAI. Integrating management tools like Jira and GitHub to streamline BDD file generation.
 - Implement the Vertex AI for commerce for an e-commerce client.
-

HCL Tech

2020–2025

Technical Lead

Cleint: BlueJeans(Verizon)

- Developed Video Telephony SDK features including Closed Captions, Video Streaming, Chat Box, Custom Videos, and Voice Features.
- Built BlueJeans Apps using **React.js, Node.js, and MobX**.
- Led a team of 5 developers and conducted code reviews to ensure quality delivery.
- **Technologies Used:** React.js, Node.js, Redis, MobX, AWS Lambda, APIs, MongoDB.

Cleint: Uber Cabs

- Designed and developed an Uber Delivery Application using **React, RemixJS, and Shopify APIs** to streamline delivery workflows.
 - Built secure and scalable **APIs** using **Node.js** with token-based authentication.
 - Improved API performance using **Redis** caching and **GraphQL** for optimized data flow.
 - Led a team of **4 developers**, managed project roadmaps, and collaborated with stakeholders to deliver business-focused solutions.
 - **Technologies Used:** React, RemixJS, Node.js, Redis, GraphQL, Shopify APIs, Third-Party Integrations.
-

Ola Cab

2019–2020

Assitant Manager

Developed an IVR & Dashboard

- Designed and implemented an Interactive Voice Response (IVR) system using JavaScript, seamlessly integrated with telephony APIs to enhance call center automation and customer interaction.
- Developed a user-friendly dashboard using React.js and Node.js, offering real-time data visualization and analytics for call center operations.
- Ensured the system was highly scalable and capable of handling high call volumes with low latency.

Flipkart

2019–2020

Sr. Product Engineer(UC)

Developed an IVR System

- Designed and implemented an Interactive Voice Response (IVR) system using JavaScript, seamlessly integrated with telephony APIs to enhance call center automation and customer interaction.
- Configured call routing, and automated menu options to streamline customer service workflows.

Built a Comprehensive Dashboard

- Developed a user-friendly dashboard using React.js and Node.js, offering real-time data visualization and analytics for call center operations.
- Enabled monitoring of key metrics such as call volume, call durations, agent performance, and system status to optimize operational efficiency.
- Designed intuitive interfaces for tracking incoming calls, agent assignments, and customer interactions, ensuring actionable insights at a glance.
- Technologies Used: React.js, Node.js, Redis, JavaScript, RESTful APIs, PostgreSQL.

Ameyo (Exotel)

2015–2019

Sr. Product Engineer

- Designed and developed a comprehensive Customer Relationship Management (**CRM**) system tailored for various clients, utilizing **React.js** for a dynamic and intuitive front-end and **Node.js** for a robust back-end.
- Collaborated with prospective clients to gather technical requirements and translated them into clear, actionable deliverables that met business needs.
- Developed features for tracking customer interactions, managing sales pipelines, and generating detailed analytics to optimize customer engagement and business processes.
- Integrated **IVR** systems with the **CRM**, ensuring seamless call flow management and real-time updates for agents.
- **Technologies Used:** React.js, Node.js, JavaScript, RESTful APIs, PostgreSQL, PHP.

ADDITIONAL INFORMATION

- **Web Technologies:** Reactjs, Redux, JavaScript, HTML5, CSS3, Styled Components
- **Backend Technologies:** Node Js, Redis
- **Database:** PostgreSQL, MY-SQL, Mongo DB
- **Debugging Tool:** React Developer Tools , Chrome Dev Tools, Redux Dev Tools
- **Tools/Utilities:** Visual Studio Code, Cursor
